PROJECTS

- **NFC Deck Tracker –** Mobile application developed with Flutter utilizes NFC to track TCG decks in real time. It helps players accurately monitor the number of cards remaining in their deck during gameplay.

- **Astral Oracle –** Web application developed with React to tarot card readings, powered by Groq's AI to deliver accurate predictions based on user questions. It offers a user-friendly and engaging experience.

- **NZT Production Report –** Web application developed with React to tracking daily factory production. Supports exporting reports in PDF and CSV formats for efficient data management.

- **Payroll System –** Web application developed in PHP to managing employee salaries. It calculates taxes, benefits, and company policies. Supports exporting financial reports in PDF and CSV formats.

- **Japanese Dessert Shop –** Program developed in Java BlueJ using OOP principles and UML diagrams to model a Japanese dessert shop. It includes use case diagrams and common design patterns.

- **Crossword Solver –** Program developed in Java to solve Ludobros crossword puzzles. It employs a backtracking algorithm and gravity-based path management to automatically find correct solutions.
